How to execute Restaurant Simulator from the command prompt:

The "build" directory should contain the following:
- The RestaurantSimulator.jar file which contains the program.
- An input.txt file with a list of input files.
- Various input CSV files containing customer data.
- Empty directory named "output" where OUT files will be generated.

To execute this program from the command line:

1) Navigate to the "build" directory using the "cd" command.
2) Run the following command:

        java -cp restaurantsimulator.jar restaurant.Restaurant

*restaurant.Restaurant specifies the package and class which contains the main method.
